A-N-D is a decorative luminaire design studio and manufacturer based in Vancouver, Canada where original collections are conceptualized, built and assembled in-house.

A-N-D investigates new design possibilities using innovative production methods while integrating the most current technologies in lighting. The result of that exploration puts forward honest products that transcend time and place. In pursuit of the visually poetic, we're inspired by the unexpected and the everyday; drawn to the capacity of light to shape and animate space.

COMPLETE COLLECTION

COLUMN grows and increases its commanding presence in a room, given its commutable quality.

VECTOR directs light to wash down its inner sloped surfaces as several panels are fitted together to create a slender rectilinear section.

IRIS is encased in an elliptical shell, an orb-like glow extends from its crystalline surface.

PEBBLE celebrates the primordial beauty of stones, enhancing their simple yet sculptural form through translucency.

LOBE celebrates the poetry of mechanics and articulates the stacking of three irregular-shaped cylinders.

PIVOT is playful and interactive as its balancing shade allows for easy adjustments.

COMPLETE COLLECTION

PIPELINE is modular and scalable as its kits of parts enable it to respond to the contours of any given space.

VALE optimizes functionality through its multidirectional luminescence while diffusing soft ambient light.

SLAB offers a visually distinctive tactile experience as well as soundproofing properties to reduce ambient noise.

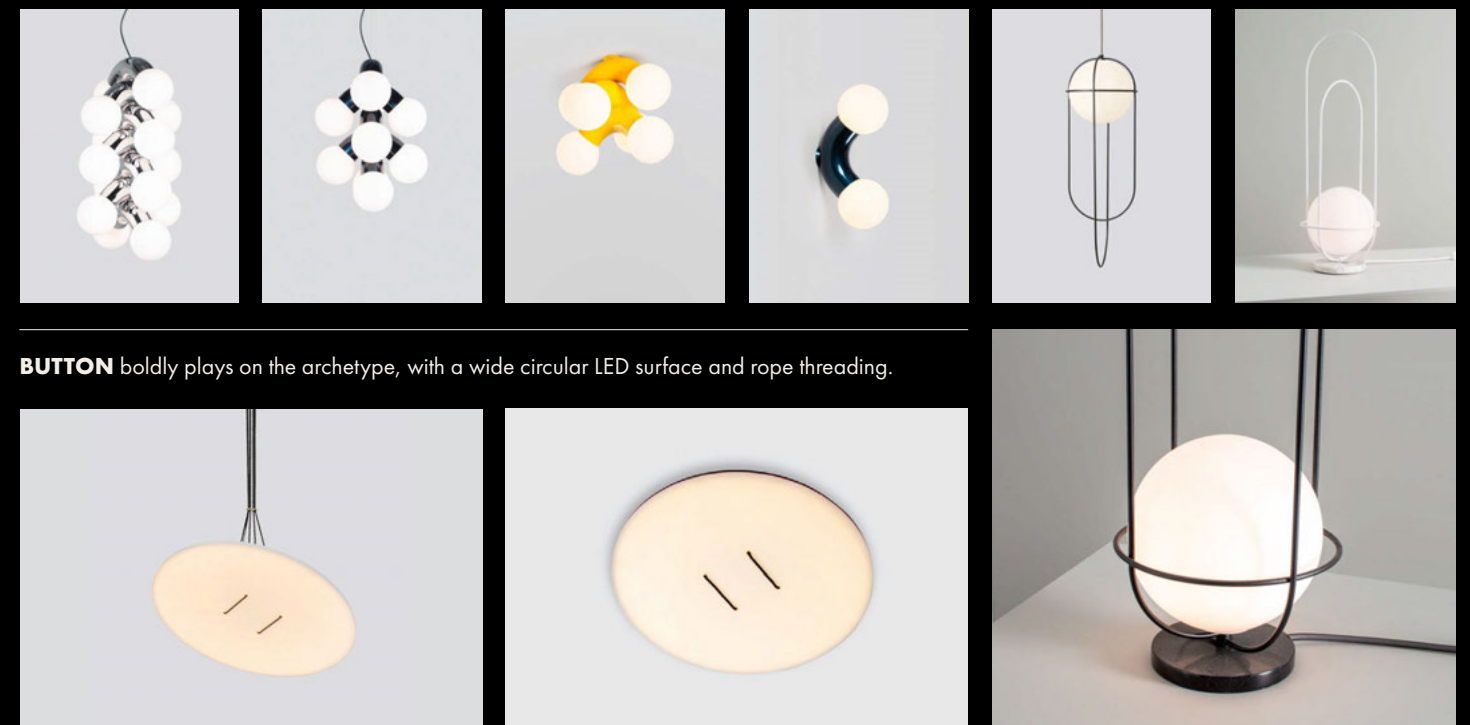

SPOTLIGHT is based on five unique shade profiles, expressing symmetry, balance and proportionate form.

VINE combines exaggerated form with repetition to create a scalable fixture.

ORBIT shows a sphere enclosed in a wire cage.

BUTTON boldly plays on the archetype, with a wide circular LED surface and rope threading.

VOL. 23

COLLECTION

VECTOR

A slender rectilinear section is cut from precise paths so that several panels are fitted together to create the Vector. Light is directed to wash down its inner sloped surfaces, proffering a gradient effect.
