BUBBLES

The Bubbles family combines a unique technology made up of air, flexible plastic, steel, and LEDs. The main component of these unusual lamps remains the air, which makes them extremely light. Bubbles includes a number of lamps of various shapes and sizes. Crystals made from air!

STARS

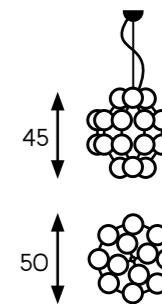

A group of spherical lamps made using the unique Bubbles technology. Years of experiments, many trials and prototypes, all led to the creation of these unusual lamps. The first was the STAR, designed in 2004, then came the Superstar and further Stars followed. The last, in 2016, was the smallest, Starlette. STAR lamps are suited to both residential and public spaces. Available in various shades of white light. They use their flickering beauty to transform every interior into something exceptional.

THE SMALLEST AND THE NEWEST LAMP IN THE STARS LINE LIGHTNESS AND A UNIQUE DESIGN ON A COMPACT SCALE.

A light-weight and unique design of the STARS series on a smaller scale. The smallest and the newest lamp in the STARS line. Designed in 2016, Starlette was created at the special request of our customers, who demanded a smaller Star. And here it is - a small but truly impressive version! It works perfectly as a single lamp and also when multiplied. Very light-weight and energy-efficient. Low-voltage transformer cleverly hidden in the canopy. A construction made of polished stainless steel. The lamp is available in three shades of white light: cool, neutral or warm white.

13

Original, fresh design and as light as air. STAR lamp is made of 48 air-filled parts in transparent electronically welded PVC with LED light-points (Bubbles® system developed by PUFF-BUFF). Bubbles® elements with their shiny surfaces reflect the ambient colors. High-quality material contains a UV filter for long-lasting protection of transparency. Low-voltage transformer cleverly hidden in the canopy. Very low energy consumption. The lamp is available in three shades of white light, can also be custom-made in colored light. Delivered fully inflated.

neutral-white (3500K)
warm-white (2700K)

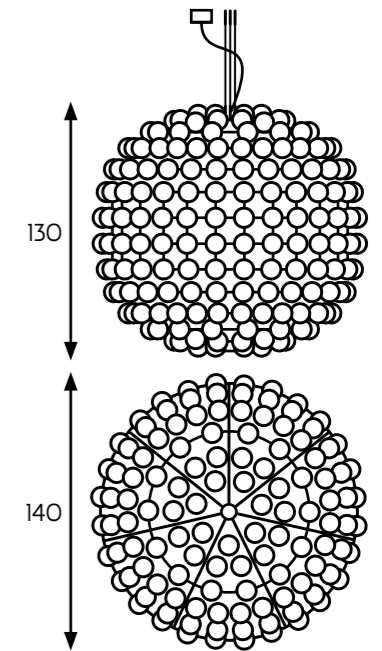

Superstar chandelier is made of 150 parts in transparent flexible PVC and LEDs (Bubbles® system). The air acting as a filling material makes a truly lightweight lamp. Inspired by traditional crystal chandeliers but made using modern technology, its geometrical shape fits perfectly for both contemporary and classic interiors. Constructed from polished stainless steel. Low-voltage lamp with wall/ceiling mounted transformer in brushed stainless-steel and acrylic cover. Single suspension cord with small ceiling attachment. PVC contains UV filter to preserve the transparency. Delivered inflated.

neutral-white (3500K)
warm-white (2700K)

Gigastar is the largest stock chandelier offered by Puff-Buff, designed in 2017, an almost two-meter-wide (six feet) ball of light. It is made of 378 Bubbles® modules - pneumatic elements made from transparent, flexible PVC integrated with LEDs. Because air is the basic building material of the chandelier, it is extremely lightweight. The delicate but strong construction is made of stainless steel.

HALF

STARS

Joined the Bubbles® line in 2018. They add a new dimension to the collection – they can conquer ceilings but they can also hang in the air. They will find themselves in interiors where great heights are not available – horizontal space is enough for them, they don't need much vertical. They are also not a burden with their (feather) weight. Round, slender and original. Available in various shades of white light.

warm-white (2700K)

The new Half-Superstar uses the unique Bubbles® to create new possibilities – reaching a variety of interiors, even those with limited vertical space or delicate ceiling construction. All this is possible because of the slim shape of the lamp and its very low weight. Bubbles® technology makes it happen! Smart design for an unusual impression. Flexible PVC contains a UV filter. Low-voltage transformer hidden in the small canopy of brushed metal. The lamp can be mixed with the smaller Half-Star or the larger Half-Megastar.

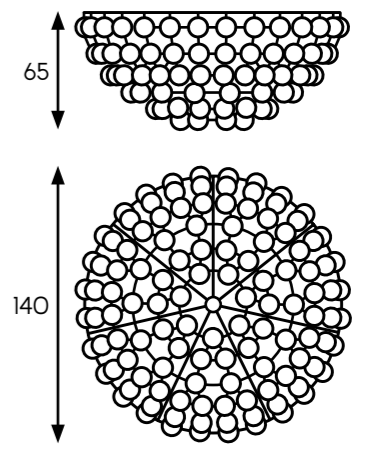

ceiling lamp

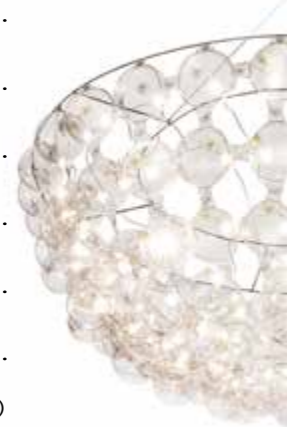

HALF MEGASTAR

SIMPLE FORM BUT RICH AND DECORATIVE EFFECT. A SPECTACULAR ELEMENT OF THE INTERIOR, USING UNIQUE BUBBLES® TECHNOLOGY.

Despite having the word "half" in its name, this chandelier makes a full impression. A design inspired by traditional crystal ceiling chandeliers creates new quality because of the use of modern technology. The lamp can be placed directly on the ceiling to brighten it up or it can hang in the air like a lightweight bowl of light. The construction is made of polished stainless steel. The lamp is available in cool, neutral or warm white light.

Spectacular chandelier in the shape of a lighting column. A marriage of pneumatic technology and LEDs for special lighting effect. an important quality is its very low weight and energy-efficiency. High quality material with UV filter to preserve the transparency. Low power consumption, max. 20 W. The tube can be easily customized in thickness and length (possible L of 10 meters or more). The lamp is available with LED lights in one of three shades of white.

C U S M A

PUFF-BUFF creates also unique light structures custom-made to order. We make our customized products mainly based on our Bubbles lighting system. Bubbles means lightness and modularity, which allows for the building of a variety of unique and beautiful light structures, and also can be used to create large structures. This is how big chandeliers are created; structures with unusual shapes, and unique lamps designed for specific interiors—resulting in custom lightening that is lightweight, exceptional, and spectacular.

Bubbles® parts are spherical modules that are combined to form a luminous net that is elastic, lightweight, and flexible. The basic form created in this way is a kind of screen or divider. The Bubbles® screen itself is a product and can be used as a luminous room-divider or decorative screen, which has many uses; it divides the space, illuminates it, and decorates. It is available as a modular option in the form of a sheet, or it can be custom-made to the desired size.

THIS UNUSUAL CHANDELIER WAS CREATED FOR THE HEADQUARTERS OF THE AGNAT COMPANY, LOCATED IN THE RESTORED 19TH CENTURY FRITZ HEROLDT'S VILLA IN BYDGOSZCZ.

Custom-made lighting projects

AN 8-METER LONG CHANDELIER

The lamp hung in the lobby of the historic building and passed through its three floors. A long lighting tube was built of 400 air-filled BUBBLES with warm-white LED lights. With an impressive length of 8 meters (over 26 ft.) the lamp's weight was only 15 kg. The lightweight quality of the chandelier was important for the investor and enabled the installation of a large luminescent structure in this beautiful historic building.

RADIANT COLUMNS OF LIGHT

FOUR IMPRESSIVE
BUBBLES CHANDELIERS,
EACH 4 METERS LONG,
WERE DESIGNED AND
MADE ESPECIALLY FOR
THE NEEDS OF THE
NEW BUILDING OF
THE UNIVERSITY OF
WARSAW.

The new building of the Linguistic Department of the University of Warsaw was built in 2013 in the green Powiśle district. The building was constructed using environmentally friendly materials. Its spectacular concrete and glass, multi-level main lobby runs along the entire length of the building, and has been equipped with four eye-catching BUBBLES chandeliers, designed and custom made especially for this project. Each chandelier is 4 meters (13 ft.) long and is 1 meter (over 3 ft.) in diameter. The chandeliers consist of over 1,500 BUBBLES lighting modules in total, and shine brilliantly with cool-white LED lights.

Architecture and Interior Design:
APA KURYŁOWICZ.

Realization:
2013.

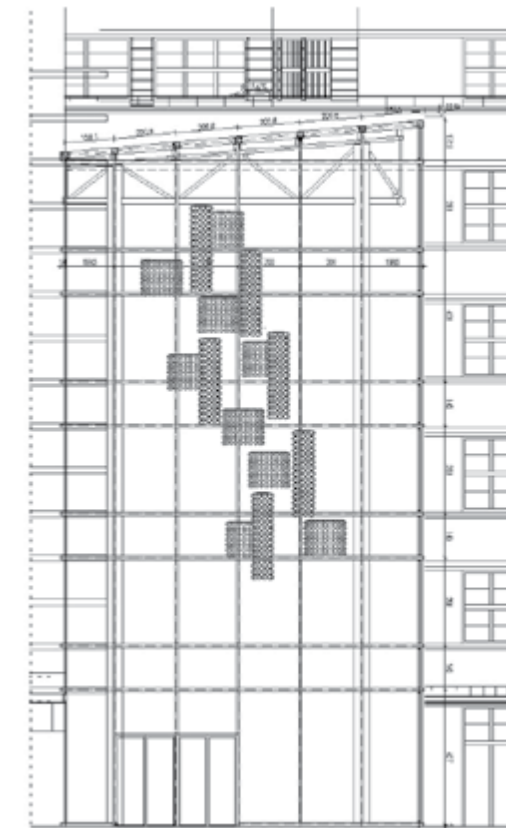

THE LIGHTING STRUCTURE CONSTRUCTED FOR THE PRESTIGIOUS BUILDING OF THE RENOMA DEPARTMENT STORE CONSISTED OF "WAVES" AND "TUBES" BASED ON THE BUBBLES SYSTEM.

MULTI-SEGMENT LUMINOUS STRUCTURE

Custom-made lighting projects

The prestigious building of the Renoma Department Store was built in 1930, and in 2009, it underwent a thorough renovation and expansion, restoring its splendour and enlarging its space considerably. Light-weight and spectacular lighting structures were installed in the main, high, glass lobby of the building.

The structure consisted of 15 pieces of specially designed "waves" and "tubes" based on the BUBBLES system, which were suspended at different heights. The great property of the Bubbles system was used here, and thanks to its lightweight, the chandeliers could be mounted directly to the glass ceiling. The project used over 2,500 LED BUBBLES lighting modules.

Original Architecture:
HERMANN DERNBURG.

Renovation and Expansion: MAĆKÓW
PRACOWNIA PROJEKTOWA.

Realization:
2009.

warm-white (2700K)

Uncompromising beauty. This extraordinary lamp, mesmerizing and vibrant. Steel diffusers with LEDs inside are flexible and sway with the air movement or touch. Made of clear hard-acrylic and stainless steel with delicate silver wires visible inside. The lamp throws out delicate light spots onto the surfaces around it. Available in three shades of white light. The creating of Critters takes many hours of careful assembling. Made only on request.

BLUE GRASS

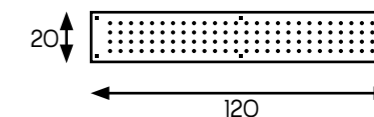

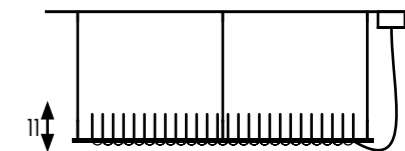

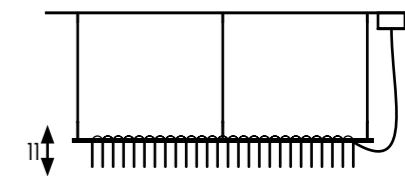

AN UNUSUAL CONCEPT,
SOMEWHERE BETWEEN
A WORK OF ART AND
AN ARTICLE OF UTILITY.
EPHEMERAL LAMP,
CASTING SPOTS OF
LIGHT AND COLOR ON
ITS SURROUNDINGS.

blue

Blue Grass is a unique decorative lamp playing with light, color, and movement. Made of clear acrylic and stainless steel flexible diffusers with 100 LED points. Moving diffusers sway with air movement or when touched. The special effect offered by this lamp throws spots of colored light onto the surface over which, or under which, the lamp hangs (the lamp can be placed in two optional positions). Blue Grass is carefully hand-crafted.

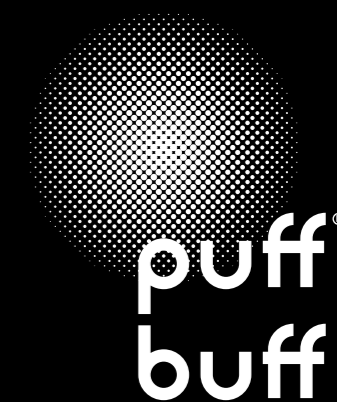

ANNA & RADEK

The lighting label PUFF-BUFF was launched in 2004 by Anna Siedlecka (industrial designer and experimenter) and Radek Achramowicz (architect & designer). PUFF-BUFF makes original lighting combining beauty and a sense of humor. Unique, awarded for their innovative design. PUFF-BUFF is particularly well known for its lightweight lamps and spectacular air-filled chandeliers. All lamps are hand-crafted in PUFF-BUFF's studio-workshop in Warsaw.
